

Q)How to give read and write permissions using Unix commands. A very simple example is to create a text file with a C program, then use chmod.

Sample code

```
#include <stdio.h>
int main()
{
    FILE *fp;
    fp = fopen("sample.txt", "w");
    if (fp == NULL)
    {
        printf("Cannot open file\n");
        return 1;
    }
    fprintf(fp, "Hello, this is a test file.\n");
    fclose(fp);
    printf("File created successfully.\n");
    return 0;
}
```

Output

- 1) Give Read and Write only to the owner
- 2) Give Read and Write to the owner and group
- 3) Only owner can read and write
- 4) Owner read/write, everyone else read-only
- 5) Owner can do everything, others can only read and execute
- 6) Owner and group can read/write
- 7) Only owner can execute

```

sai@kornypc:~$
sai@kornypc:~$ gcc main.c -o program
sai@kornypc:~$ gedit program.c &
[1] 797
sai@kornypc:~$
** (gedit:797): WARNING **: 04:48:39.039: Could not load Peas repository: Typelib file for namespace 'Peas', version 0' not found
